Polyhexamethylene biguanide and excipients

PRODUCT SPECIFICATIONS:

BIORAD DERMİTE is a liquid antiseptic soap containing PHMB which was prepared for hand and skin antiseptis. It is recommended for sensitive and allergic skin type of users for hand and skin disinfection due to its dermatological compatibility. Its pH value is compatible with skin.

AREAS OF USE:

It is used in any place where health care service is provided for the hygienic and surgical antiseptis of the hands and the skin such as hand antiseptis before the surgical intervention and washing the whole body of the patient before the intervention, dental surgery and dentistry, against the cross contamination risk of patients and personnel, nursing homes, nursery schools, clinics, operating rooms, intense care units, patient care at home. It is used as an aid for anti-infection prophylaxis in food production and processing industry and physician clinics.

USE:

For Hygienic hand antiseptis; 3-5 ml Dermite solution is handled and applied by rubbing without dilution for 1 minute and then rinsed with water as per EN 1500 standard. For Surgical hand antiseptis; before and after intervention, 2x(3-5) ml of solution is handled and applied to hands and arms until the below of the elbow and inside the nails for 2 minutes and then rinsed with water.

ANTI-MICROBIAL CHARACTERISTICS:

Bactericide, Fungicide, Virucide, Tuberculocide, Antimycobacterial
